

REMOVER concentrated detergent for adding to the water in water wash spray gun cleaners

Remover is a concentrated detergent that can be added to water. It provides an ideal formula to wash spray guns and accessories stained with water based paint. It is recommended for all models of water spray gun washer, both automatic and manual.

Technical features:

- Non-flammable
- Low-foam
- Keeps diaphragm pumps, pipes and spraying nozzles clean.
- Inhibits dirt from depositing on the internal walls of the spray gun washer, and helps cleaning
- Lowers the formation of cakes on the paint/water separation filters, making it easy to remove them. Filters are therefore re-usable
- After coagulation, the product can be re-used.
- If used cold, it greatly improves spray gun washing also when paint stains are partially dry. It works even better when used hot, it provides fast and thorough cleaning of spray guns even with dried on paint.

Solufloc powder for treating wastewater in water wash spray gun cleaners

Solufloc is ideal for treating wastewater containing water based paint. The product can be used in any of our water spray gun washers using the separation kit that is included.

This precipitation and flocculation product has been created to reduce the problems and costs associated with wastewater treatment. It precipitates, flocculates and absorbs in one operation. It is a multi-component system of an almost water insoluble basis containing a high proportion of active adsorption substances and added electrolytes.

It is easy to use and economical. It is simply added to the wastewater and mixed for 8 - 10 minutes until the flocks can visibly be seen to be formed. They can then be released through the machines filter system allowing the re-use of the water several times before disposal.

- Easy to use
- No harmful effect on industrial hygiene.
- Produces clear water for disposal or re-use
- Produces a good flock that can be filtered easily
- economical in use
- Gives you a "Greener" workshop

PACK SIZES

The special water additive **REMOVER** is available in 4 and 10 litre packs.

Simply add a small amount to the cleaning water for great results.

Powder flock SOLUFLOC is available in 2 and 25 kg packs. Simply add about 50 grams per 25 litres of water, mix for 10 mins and filter.

Safety Material Data Sheets are available on request.
