- ◆ Stainless steel wash basin
- ◆ Manual wash
- ◆ Wastewater treatment kit
- ◆ Robust, high quality
- ◆ 2 year guarantee
- ◆ Easy to install

## For water based paints

The **MINI-WATER SPRAY WASHER** is pneumatically operated and is a small and cost-effective machine for manually washing water-based paint from spray guns and small objects. The controls, located on the front section, make it easy to use.

The spray-washer is fitted with a small pump and sprayer that draws clean water from a container located at the bottom of the machine and a second sprayer for final washing that is connected to the mains water supply. A blowing gun then cleans and dries the guns and washed pieces.

## SEPARATING THE PAINT FROM THE WATER:

The stainless steel washing tank has an internal system that mixes the dirty water with flocculating powder.

The water and coagulated colour deposits are then discharged by a valve in the pre filter and filter bag, where the solid particles are separated from the water particles. The filtered water can be re-used for washing.

**REMOVER.** The additive that makes cleaning water based paint from guns easy and effective.

## Wastewater filtration kit.

Included is a filter system to treat wastewater so it can be recycled
